The **Negative Lift** Concept

The term **negative lift** sounds contradicting, but actually refers to the ability of the mast and carriage to lower a load below the ground level of the forklift. Used primarily in the marine industry, negative lift allows marina owners to lower boats into the water quickly and easily, as well as submerge the forks in the water to retrieve boats. With finite amount of land along the water and the growing population of boat owners around the world, drystack storage is becoming an ideal option for marina owners to supplement wet slips.
